# LEAN, MEAN GRINDING MACHINES

These ultra-rugged, dual-shafted Monster Industrial grinders are used in a wide range of industries including petroleum, healthcare, wastewater, agriculture, food processing, sewage pumping, ship food waste, e-waste and more. HYDRO in-line grinders bolt into a pipeline and reduce the size of solids in sewage, sludge or slurries protecting downstream equipment – including pumps, valves, centrifuges and heat exchangers. SHRED hopper grinders quickly cut problem solids down to size. Two rows of steel cutters rotate slowly and with incredibly high torque turn large troublesome solids into tiny particles.

# Industrial Grinding Applications

## Organic Waste Management

- Food waste management
- Agriculture waste
- Seafood processing
- Animal waste processing
- Spoiled food destruction

## Marine

- MARPOL food waste disposal
- Fish waste processing
- Ship sewage
- Offshore oil platforms
- Public fish cleaning tables

## Energy

- Oil sands processing
- Grease receiving
- Biogas feedstock
- Drilling mud recycling
- Tank bottom cleaning

## Facilities Management

- Sewage pump protection
- Food waste recycling
- Healthcare waste destruction
- Aircraft blue water receiving
- Septage receiving

## General Industrial

- Industrial processing
- Product destruction
- Contraband destruction
- Closed-loop process recycling
- Waste volume reduction
